Coastal Development Permit approved for construction of parking lot, bike path, Shoreline Dr, and landscaping—deemed "temporary infrastructure" with a lifespan of 5 to 15 years.

Bike Path Constructed
1989
Dune Restoration
1991

“Ventura County Fairgrounds Shoreline Resource Management Plan”—this Plan was a requirement of the Coastal Conservancy funding, and although other agencies abandoned the plan, Surfrider has remained the steward of the area since 1991.
Emergency Revetment 1992

- rocks dumped near river mouth without permit

ACOE - Notice of Violation of Clean Water Act
Coastal Commission - Cease & Desist Order

Settled - given 18 months for a plan
Working Group
1995 – 2011

1995 Working Group convened – includes City of Ventura, Coastal Conservancy, State Assembly, State Senate, 31st Agricultural District (Fairgrounds), Coastal Commission, State Parks, Surfrider Foundation
a slide show designed to elevate the awareness of coastal erosion problems in Ventura County and to promote a policy of beach restoration rather than continued seawall construction. We know that hard construction causes the loss of the beach, and the City has begun to see the value of the beach at Surfers Point. Paul Jenkin has presented "Growing the Beaches" to the City of Ventura, BEACON (Beach Erosion Authority for Control Operations and Nourishment), and the California Shore and Beach Preservation Association (CSBPA). He also presented at a public forum in San Clemente where residents are concerned with plans for a new bike path along their beach. A public showing at Patagonia in Ventura drew about 40 interested persons, and the website continues to draw comments from concerned people, some of whom have written to the city and/or done research projects for High School or College. Selections of photos and graphics are displayed at our "road show" to educate the public during local events such as the annual Beach Party.

American Rivers listed the Ventura River as the third most endangered in the nation. A press conference was held and Surfrider spoke alongside other members of Matilija Coalition.
Working Group agrees on plan  
May 10

Surfer's Point Working Group has agreed on a plan for the Surfers Point Restoration Project

The plan moves the bike path to the back of the parking lot. The rest of the parking lot will be removed and replaced with dunes and cobble. This new location of the bike path provides for an average 64.5 foot setback (i.e. "retreat") from the existing edge of the bike path. Shoreline Drive will be widened back to the Fairgrounds fence to provide face-in beach parking along the street as well as three lanes of traffic.
Cobble Demonstration Project

This project required cooperation with the Ventura County Fairgrounds, funding from the California Coastal Conservancy and permits from the California Coastal Commission. The result is an increased awareness of coastal sediment supplies among these government agencies. And in the process we benefit from the temporary improvement of the eroded section of Surfers' Point. Tons of dangerous rebar and rip-rap were removed and replaced with cobbles from the river, making the beach a much safer place.
Draft EIR circulated
Mar 6
Public meeting- Draft EIR does not acknowledge Surfrider concerns about dunes or artificial fill – also does not include Surfrider plan for full beach restoration. Public discourse prompts rewrite of DEIR.
The dune mitigation issue, combined with the "public discourse", prompted the EIR committee to reject Staff recommendations to approve the Draft EIR. This places the burden on city staff and their consultants to revise the Draft EIR document to address these concerns.
Public Workshop
Nov 29

Over 100 people packed into a room in the Derby Club on Thursday evening

Surfrider Foundation supports the project in concept, the organization holds some significant concerns about the details. Jenkin continues, “the plan as currently proposed does not demonstrate a respect for the dynamic processes inherent to the mouth of the Ventura River and the remaining dune area. The original intent was to relocate the damaged infrastructure to allow space for the daily ebb and flow of sand and cobble. The current design calls for a complex engineered solution that may unintentionally damage the beach by inhibiting this process.”

This project offers an opportunity of state and national significance for its innovative solution to coastal erosion problems. Jenkin concludes, “because this project may serve as an example for other cities experiencing similar problems throughout the country, we want to be sure that the project approved by the City of Ventura achieves a successful long term solution.”
EIR to be rewritten
Jan 4

There were officially 101 people signed up at the November Public Workshop at the fairgrounds! According to the city they were almost all surfers (although there were many other local folks who came because of the Surfrider newspaper ad.) There was the impression that there was a lot of support for the "Surfrider Alternative".
Draft EIR w/ Surfrider proposal re-plans 2 more years until EIR and complete – June ‘04

...a fiscal impact of $39,000. City has approved the additional funding. $281,417 remains...
New Fair Board
January 21, 2003

Directors of Seaside Park voted to honor the prior board's commitment to Managed Retreat, and endorsed the EIR's "Preferred Alternative" originally proposed by the Surfrider Foundation. This move clears the way for final design of the beach restoration project, the consensus solution to more than a decade of discussion on how to solve this coastal erosion problem.

Following a presentation by Ventura City Engineer Rick Raives, and considerable discussion and public comment, the board approved the "Managed Retreat" concept with only one dissenting vote. Originally conceived by a working group of State and Local government agencies and citizen representatives, the retreat concept includes relocation of the erosion damaged bike path and parking lot at Surfers Point, near the mouth of the Ventura River. The preferred alternative provides for comprehensive restoration of the beach and dunes and the excavation and removal of all artificial fill placed beneath the parking lot.
City Council Approves EIR
Jul 23

Ventura City Council voted unanimously to certify the EIR and hire a consultant for the final design of the "Surfers Point Managed Shoreline Retreat" project.
The Working Group reached a unity and was agreed that the Surfers Point M be revised to reflect the changes in parking areas. This is expected to be.

Meanwhile the Fairgrounds is seeking their Master Plan EIR. Once these the search for grant funding may be the Managed Retreat Project.
The consultants presented a design that includes a re-setback based upon a wave runup analysis. The runup analysis used a 50-year wave under worst case condition (i.e. high tide plus storm surge plus sea level rise) for the proposed beach restoration with the cobble and sand dunes. This analysis moved the bike path back a few feet from the area nearest the rivermouth.

The design for the relocated parking lot has been refined to include 148 standard paved spaces and 171 "GrassTurf" spaces for reduced frequency use. This is intended to enhance the "park-like" makeover for the fairgrounds and should be an improvement over the current asphalt and parking lots. The new parking lot will be "Pay Parking" as it is currently.

Also, since Shoreline Drive will be modified and parts removed, the design includes a turn around before entering the pay lot and 25 "surf check" parking spaces along the road. This will allow continued "drive-by" surf check as well as a new 20 minute short-term free parking area. The process is moving forward, albeit very slowly, but the city engineer expects the final design to be completed in 2005.
Federal TEA grant
Mar 29

the Ventura City Council earmarked $1 million in transportation funding for the reconstruction of the Surfer’s Point bike path that was damaged in 1991 by beach erosion. Federal grants will provide money for the bike path portion of the “Managed Retreat” beach restoration project. The final design will be completed this year, and the total construction cost is estimated to be $3.8 million. The city is actively seeking grant money for the remaining construction costs, most likely through parks and clean water funding sources.

The majority of the over $500,000 design costs for the city-led Surfer’s Point project came through the federal Transportation Efficiency Act for the 21st Century (TEA-21). Since 1991, the city of Ventura has received $15,445,327 in Federal Transportation Act Funding.
New Fair Board questions project
March 27, 2006

$5 million plan to relocate trail raises questions - Despite several formal Fair Board approvals over the years, including the development of a new Fairgrounds Master Plan, newly appointed Fair Board members have now expressed concerns regarding losing the public street (Shoreline Dr.) that separates the beach from the Fairgrounds. There is the perception that the State Coastal Act allows protection of a public street without needing a coastal permit if waves ever eroded up to a public street, but an emergency permit would be required to protect the area if it was a parking lot or any other improvement. The meeting will discuss ways to afford a "level of comfort" to the new Fair Board without making changes to the current design, as well as other issues related to the project.
**Fairgrounds criticized for lack of action**

September 27, 2006

Despite repeated pleas for support of the project, the Fair Board voted unanimously Tuesday to postpone a decision until its October meeting.

The board’s staff offered little explanation for the delay, saying only that more time was needed to better understand how the project, now estimated at $4 million, would impact the fairgrounds.

As a result, an October request for a critical construction permit from the California Coastal Commission must be withdrawn and requested later, possibly as early as November or early next year. A coastal permit is needed to move the trail on the seaward side of Shoreline Drive about 65 feet inland.

Meanwhile, the pedestrian and bike trail continues to disintegrate, leaving behind an unsightly hazard on the widely used Ventura waterfront.

Angered proponents said Tuesday’s decision puts the project in jeopardy.
Fair Board approves project
October 25, 2006

board’s unanimous decision gives new momentum to a
decade-long effort by outdoor enthusiasts, coastal
watchdogs and city leaders to relocate the eroding path and
re-create a natural habitat rather than erect a sand wall.

The project, estimated at $4 million, now goes to the
California Coastal Commission, which is expected to
consider and approve a coastal construction permit as early
as next month. A coastal permit is needed to move the
damaged bike and pedestrian trail on the seaward side of
Shoreline Drive about 65 feet inland.
Coastal Commission approves Surfers Point project
November 17, 2006

A coastal construction permit was needed to move the damaged bike and pedestrian trail on the seaward side of Shoreline Drive about 65 feet inland.

The commission's approval late Thursday pumps new momentum into a decade-long effort by outdoor enthusiasts, coastal watchdogs and Ventura city leaders to relocate the eroding path near the county fairgrounds and recreate a natural habitat rather than erect a sea wall.

"This is a huge milestone," said Paul Jenkin
Ventura council approves more funds
April 10, 2007

additional $130,000 to complete designs
The project has an estimated cost of $5.5 million, but that
could grow higher due to rising material costs. The city has
about $2 million for the project and has applied for federal
and state grants to fill the gap.

San Luis Obispo-based RRM Design Group is scheduled to
finish the engineering plans this year.

Ventura OK's Surfers' Point Project
August 5, 2008

The passage of the state budget allows the previously earmarked grant funding to be released in time to break ground this year. Construction of the first phase of the project should begin in November 2009.
Caltrans denies funding
May 11, 2009
Federal TEA Grant requires CalTrans signoff, which is refused
Federal Highway Administration approves (Tf) grant
October 2, 2009

Based on the FHWA’s careful review of the project
documents provided by both Caltrans and City of Ventura,
and in response to the congressional inquiry by
Congresswoman Lois Capps, attached is our agency
decision letter with respect to the eligibility of the beach
protection and erosion control components of the above-
referenced Federal-aid highway project.

We request that Caltrans HQ and Caltrans District 7 facilitate
the timely implementation of our decision, given the time
sensitivity in the coastal permit conditions for the project.
Thank you to both Caltrans and the City of Ventura for
helping us respond to the Congressional Inquiry with a well-
informed decision.¹

Many thanks to Congresswoman Lois Capps, everyone who
wrote letters, State Assemblyman Pedro Nava, and all the
state and local staff and political representatives who
weighed in on this!
City approves cobble funding
February 22, 2010

City Council approved the purchase of the cobble and sand ($600,000). The source will be the Corps of Engineers Santa Paula Creek project, in which sediment is being excavated from the streambed.
